Wonderware Recipe Manager Plus

Digitizing Formula Management and Recipe Execution
Secure process and product quality while increasing operational agility and the ability to manage more product variations. The control system neutral software enables standardization of formula and recipe management across the business and helps speed up new product introduction processes.

Summary
Wonderware Recipe Manager Plus is a commercial off-the-shelf formula and recipe management software for simplification of recipe optimization, deployment, adaption and execution in manufacturing operations. Electronic recipe management secures consistency in product quality and increases efficiency through automation of equipment setup processes and recipe execution. The automation system neutral software enables standardization and central management of product formulations for use in multiple production locations and is designed for operational team collaboration to adopt new recipes faster.

Business Value
Wonderware Recipe Manager Plus software increases business agility by managing more product variations with reliable quality consistency, giving companies the ability to take new products to market faster.

Benefits
+ Reduce machine setup and changeover times
+ Consistent batch to batch production results
+ Improve operational performance and flexibility
+ Reduce risks of managing product variation
+ Improve productivity and quality with reports and records of execution history
+ Lower cost of compliance with electronic change and execution history, including electronic signatures
+ Facilitate standardization of recipe management to improve the new product introduction process
+ Fast time to value with rich out of the box functionality
+ Reduce total cost of ownership with a web based application architecture
Overview

Effective formula and recipe management connects the world of product development with the people and systems operating production equipment on the plant floor.

Wonderware Recipe Manager Plus offers scalability for Formula or Recipe management needs:

+ **Formula Management and Download**, enables fast and consistent equipment set up – the key to flexibility for many CPG or Food and Beverages manufacturing processes.

+ **Recipe Management and Execution**, provides automation and repeatability of recipe execution on production units, work cells or production lines for batch oriented and hybrid processes.

Formulas and recipes are defined independent of shop floor equipment, which allows users to centrally manage product definitions for use in multiple production locations regardless of each location’s automation system.

The web based application and user interface is designed to empower collaboration across R&D, process engineering and shop floor operations.

Recipe Manager Plus’ user interface is accessed via a web browser on desktop, HMI and mobile devices.

The software can be integrated with Wonderware System Platform or used standalone using OPC UA (DA spec) for connectivity to any control system.

This unique approach to industrial formula and recipe management reduces the number of systems and formats typically found in plants today. In addition the approach secures consistent process and product quality and facilitates regularity compliance.

**Formula Management and Download**

Formula management focuses on managing formulas and equipment for consistent parameter value transfer to control systems.

A formula template defines a set of parameters with default values. Parameter extensions are offered to extend the default parameter structure by adding columns for individual needs.

Users can quickly generate formula variations by saving formula instances with specific parameter values. Changes made to a formula template will be populated to unmodified (default) parameter values in its formula instances.

Equipment contains a set of related parameters and is managed as part of the systems equipment model. Equipment parameters are mapped to control systems variables and IO through Wonderware System Platform or OPC UA.

Formula download is easy, using the web based user interface. Operators assign a formula by browsing and selecting from a list of available formula instances for specific equipment. Operators can then review the assigned target values, adjust them within given limits, and download the formula to the connected automation system.

An electronic record is automatically created for each formula download, documenting the parameter values and when configured - the electronic signatures provided, for example when changing default values, or downloading a formula.
Recipe Management and Execution

Recipe management and execution adds the ability to create procedures defining the order in which capabilities are executed in a recipe. A capability is a generic item that can be used across any equipment that features a specific functionality. Manual capabilities are available for manual entry and acknowledgment.

A recipe template contains the defined procedure and a mapped formula template, associating formula parameters with capability parameters.

A recipe is derived from a recipe template by selecting a specific formula instance. Recipes define the make of a product using a defined procedure with a set of product specific parameter values.

To execute a recipe an operator simply assigns a recipe to equipment and starts, monitors and controls the execution. Parameter values can be adjusted within the defined limits either prior to a recipe start or even prior to a capability being executed.

The recipe procedure is coordinated with the control system using a state interface that can be configured to provide full alignment with ISA-88 standards.

Role-based Security and Electronic Signatures

The software includes the configuration of users and user groups with individual permissions for viewing, editing and downloading formulas or execution through the provided user interface. Electronic signatures (done by / check by) including optional comment enforcement for actions are available to facilitate implementations that comply with life science industry regulations such as FDA 21 CFR Part 11 or cGMP guidelines (EudraLex Vol. 4 Annex 11).

Recipe Version Control

Equipment, formula and recipe templates, as well as all instances are “versioned” items. Any time one of these configurations is changed, its version number is incremented. An updated “current” template provides change notifications and enforces updates of related instances. A new version of a formula, recipe or equipment requires approval prior to production use.

Electronic History Records and Reporting

Comprehensive history records and reporting allows users to view historical information about formulas and recipes that have been created, changed and executed including done by and check by information.

Users are provided with views into equipment, formula and recipe execution history and parameter value details within the web-based user interface. Item version comparison views and importing formula values from recipe execution history helps to capture and replicate the ‘golden batch’ setup.

To reduce the efforts of individual report creation the software comes with a set of Microsoft SQL Server Reporting Services (SSRS) report samples.
Wonderware Recipe Manager Plus
Technical Specifications:

Operating Systems

+ Windows 7 Professional, Enterprise, or Ultimate Edition (32-Bit and 64-Bit)
+ Windows 8.1 Professional or Enterprise Edition (32-Bit and 64-Bit)
+ Windows 10 Professional or Enterprise Edition (32-Bit and 64-Bit)
+ Windows Server 2008 R2 Standard or Enterprise Edition (64-Bit)
+ Windows Server 2012 Standard or Data Center Edition (64-Bit)
+ Windows Server 2012 R2 Standard or Data Center Edition (64-Bit)
+ Windows Server 2016 Standard or Data Center Edition (64-bit)

Database Technology

+ Microsoft SQL Server 2008 R2 Express (32-Bit)
+ Microsoft SQL Server 2008 R2 in Standard or Enterprise Edition (32-Bit and 64-Bit)
+ Microsoft SQL Server 2012 Express (32-Bit)
+ Microsoft SQL Server 2012 Standard or Enterprise Edition (64-Bit)
+ Microsoft SQL Server 2014 Express (32-Bit)
+ Microsoft SQL Server 2014 Standard or Enterprise Edition (64-Bit)
+ Microsoft SQL Server 2016 Express, Standard or Enterprise Edition (64-Bit)

Browsers

Wonderware Recipe Manager Plus supports the following Browsers:

+ Microsoft Internet Explorer, Version 10 or higher on Windows OS
+ Google Chrome, Version 32 or higher on Windows OS
+ Mozilla Firefox, Version 26 or higher on Windows OS
+ Apple Safari, Version 6.0 on iPad devices
